## CUSTOM VINYL WINDOWS AND DOORS

### Protector Series™ : Strong & Silent

When the weather wants to adversely Impact your plans...

Plan your Impact on the weather, with

### SHOWCASE® Storm Protector™ and Sound Protector™ Custom Vinyl Windows and Doors

At Showcase® Custom Vinyl Windows and Doors, we take the weather seriously. We live on the coast and our products are manufactured in Houston. We are up against the same brutal and seasonal elements you are, and craft our products accordingly.

- We use double-strength, tempered and laminated glass, with a KeepSafe Maximum® PVB interlayer permanently bonded under high pressure between two panes.
- Our vinyl frames are stronger, thicker and heavier than other vinyl producers allowing our products to be among the best in the business. We use the same sturdy vinyl extrusion for our Impact and Non-impact frames, allowing us to maintain the beauty and performance of all our windows and doors.
- Showcase products have been tested all along the gulf coast against some of the toughest hurricanes the United States has every seen. Our products have passed with flying colors, withstanding the likes of Hurricane Katrina, Rita, Ike and others.

Go ahead, give our products a close inspection. What you will find is exacting and scrupulous attention to detail, painstaking manufacturing processes, the finest materials, and a fit and finish second to none. We take justifiable pride in the extraordinary reputation of our products and craftsmanship, and back these up with world-class service and warranty. So, do yourself a favor: select Showcase® Custom Vinyl Protector Series™, with KeepSafe Maximum® for your window and door needs, and enjoy some peace of mind.

**Leave the weather to us.**

# Protector Series™ : Strong & Silent

## Proven resistance to penetration from flying debris:

Standardized missile testing shows our windows resist repeated blows by a 9 pound, 10 Ft, 2x4 beam traveling at 34 mph. They have resisted wind velocities of 171.54 mph. No need for ungainly plywood, or telltale metal shutters. Meets CPSC, CFR 1201 and ANSI Z97.1 safety glazing standards.

## Greatly reduced sound transmission:

Acoustic studies show reductions of up to 50% in the transmission of outside noise, compared to ordinary glass. This makes for a more peaceful and restful home, regardless of location.

## Shielding from ultraviolet rays:

99% of the sun's damaging ultraviolet rays are deflected by the KeepSafe Maximum® PVB interlayer, up to 300 nanometers. Less glare. Less fading. Longer lasting upholstery, carpet, flooring, furniture or drapes.

## Protection from break-ins by vandals, burglars and weather:

Repeated blows from bats, crowbars, hammers or bricks may cause the glass itself to crack. The PVB interlayer holds the glass together and the pane within the frame, making access to the house interior difficult. In a hurricane, the integrity of the window is not compromised. Meets ASTM F-1223 (class 1) forced entry standard.

### CUSTOMER TESTIMONIAL:

“Just wanted to let you and your crew know that YOUR WINDOWS ARE THE BEST. We did not get one drop of water in any of the Showcase Windows that are installed in our office – all 28 of them. Hurricane IKE passed here with over 100 mph winds! You make a FANTASTIC product and I did not even have to “board up” a single one of them due to the laminate glass.
